IDENTIFY Workflow

Waiting Room

- Patient Self-Check-In
- Automated Queuing
- Treatment Information (time, location)

1

2

Accessory Set-up & Calling Patient

- Patient Data and Treatment Site Import from OIS
- Accessory Verification & Navigation

3

Setup is prepared: Patient Positioning

- Patient ID Verification
- Patient (Self) Positioning Guidance
- Verification of Patient Orthopedic Setup (Surface)

4

Confirming Setup

- Therapist confirms Setup and leaves the Room
- Interlock is cleared for Treatment

5

Patient Monitoring & Gating, Collision Monitoring

- Patient Surface is monitored for gross Motion
- Marker on Patient is monitored for Gating Techniques
- Treatment is interrupted when Threshold is exceeded

6

End of Treatment

- Automated Treatment Protocol is exported to OIS
- All Data can be drawn from Statistics Interface

Reception

humediQ

Patient Setup

Patient Verification

The main interface shows a patient lying on a table in a medical setting. A software interface on the right displays the following information:

Patient Information

Unexpected Patient

Patient

Jonathan Ford

Date of birth: 19-09-1982

Gender: Male

Medical: 57557064

Site: prostate

External Inhibit: Raised

humediQ

patient tag was already used for another patient.

A smartphone displays the patient information for Jonathan Ford, including a photo, name, date of birth, gender, medical ID, and site.

Patient Setup

Patient Verification

The interface shows a top-down view of a patient on a treatment table. A white box labeled "Identify" is positioned over the patient's head area. A green checkmark is visible on the table near the patient's feet.

Patient Information

Collision Monitoring

Automated Session Report

Automated Treatment Protocol Export to OIS

- IDs [patient, therapist, accessories]
- Positions
- Surface
- Setup Photos
- TimeStamps

Statistics Interface

Surface and markers are tracked in relation to the couch and the couch is tracked in relation to isocenter (update rate 10 and 30 frames per sec)

This allows for **couchkicks and couchmoves** at fluent augmented reality guidance and permanent motion monitoring

All identities are tracked with their positions, angulations and surfaces in „realtime“
